

FREE Peripheral Artery Disease (PAD) Screening

PAD is when the arteries in your arms and legs develop plaque buildup. With PAD, you are at higher risk for heart attack, stroke, and in the worst cases, amputation.

Should you or a loved one be screened?

YES, if these statements describe you:

- Over age 49
- A smoker now or in the past
- Have any of these: Diabetes, Kidney disease, high blood pressure, or high cholesterol

You will not receive healthcare at this event. The screening results contain important information that you should share with your doctor.

TAKE A STAND:

Catching PAD early is very important.

PAD patients have a **6-7 TIMES GREATER RISK** of coronary artery disease, heart attack, and stroke.¹

¹ According to the American Heart Association, people with PAD have a 6-7 times greater risk of coronary artery disease, heart attack, stroke or transient ischemic attack ("mini stroke") than the rest of the population.

Call today to register 1-844-558-0957

Screenings will be held at:

ELMWOOD / EL BUEN SAMARITANO UMC

1315 Berkley Ave Dallas, TX 75224
